Engineering

Founded in 1881, Meikosha, Ltd. was the forerunner of today's OKI and Japan's first telecommunications equipment manufacturer. Meikosha's success came from the company's "enterprising spirit" to attempt to become the first domestic manufacturer of telephones only five years after Alexander Graham Bell's invention of the telephone in 1876.

Underpinned by an "enterprising spirit" which has been nurtured and passed down through the company's long history, OKI has developed and provided a succession of products that have contributed to the development of today's information society. Always in the vanguard of technology innovation, OKI began selling computers containing Japan's first domestically developed core memories, developed the world's first automated teller machine (ATM) that recycles deposited bills as funds for withdrawals, and introduced the first Voice-over-Internet Protocol (VoIP) system to the Japanese market.

As a company that supports social infrastructural development both in Japan and overseas, OKI is quick to grasp and incorporate the needs of the market into the development of products that satisfy customers to contribute to the development of information society. Guided by its brand statement, "Open up your dreams", OKI will diligently strive to achieve the dreams and hopes of stakeholders, to become the preferred global partner of choice and achieve continuous growth.

## **We've been designing and manufacturing printers since 1964. And gave the World its first LED printer in 1981.**

A pioneer in LED printers, we developed the world's first printer in 1981 using LED technology as the light source, achieving superior advantages over laser methods. Today, OKI provides printers to customers in 100 countries. Individuals, public sector offices and enterprises of all sizes choose OKI printers for their technological advantage and time-proven reliability. Our quest to enhance business efficiency and create comfortable office environments for everyone never stops.

# Digital LED technology by OKI

## What is Digital LED technology printing?

LED stands for Light Emitting Diode. To create a printed document, the Digital LED print-head illuminates the photoconductive drum by emitting an entire line of dots, all at one go. This creates a positive charge which subsequently causes the negatively charged toner to be fused onto the media to create the image.

Media (or paper) passes through the printer in a smooth one-directional flow, allowing the LED printing process to take place before toner is finally fused onto the media to produce an image or printed document. LED printing engines produced by OKI ensure super fast speeds and reliability throughout this process

## High-Definition LED Print-Heads

Fundamental to any digital printer is its light source. OKI has pioneered Digital LED printing, which has clear advantages over laser, delivering superior images and stronger colours - fast! Unlike laser printers, there are no moving parts within the LED mechanism, which means greater reliability and increased productivity.

Multi-level LED print-heads from OKI accurately control the intensity of the light source, resulting in up to 256 levels of colour intensity.

## Microfine High-Definition Toner

Developed in conjunction with our printer technology, genuine OKI microfine toner ensures that documents are printed with superior print quality: graphics and texts are sharper, crisper and glossier, even on ordinary office paper.

Conventional Crushed Toner

Microfine Toner from OKI

## Single-Pass Colour™; Flat Paper Path

Our innovative Single-Pass Colour™ technology has enabled OKI to consistently lead the revolution in fast, affordable colour printing. Single-Pass Colour™ printing is achieved using our flat paper path technology, with four or more individual printing stations using our world-renowned LED print-head technology; and these digitally controlled LED print-heads with over 10,000 LEDs provide up to true 1200 x 1200 dpi print resolution with unsurpassed sharpness.

With our straight-through flat paper path technology, media (paper) is advanced and held with precise registration with the electro-statically charged transfer belt. As the paper approaches, the print-head flashes the image to the drum which transfers the toner to the paper. In this way, the paper passes by each drum colour a single time, instead of wrapping all the way around the drum as is often the case with some laser technology. This technology allows for a much wider choice of print media (paper) for users to utilise, including heavy card stock, long banners - up to 52" (1.3 metres) in length, labels and more.

For our users, they'll simply enjoy true media flexibility as well as machine reliability.

The primary advantages of Single-Pass Colour™, Flat Paper Path include:

**Faster print speeds**

**Printing on heavier media (paper) weights with ease**

**Handle longer media (paper) lengths, including banners up to 52 inches (1320mm)**

### Four In-line Digital LED Print-heads

## Printer Control System

Each colour printer has an advanced printer control system that constantly checks alignment, registration and colour balance, to make printing as simple as it should be and ensure the quality of HD Colour output is produced every time.

There is a noticeable difference between images with and without HD Colour.

Without Photo Enhance

With Photo Enhance

This system combination of software and firmware ensures that users enjoy:

# 01

Automatic adjustment for optimum print quality

# 02

Automatic adjustment for different media weights; this eliminates manual setting while maintaining the highest quality

# 03

Auto colour checking and matching with Photo Enhance for professional photo-like quality

# 04

Automatic alignment for sharp, clear images every time

# Smart Office Solutions

## Solutions categories

What?

### Capture and Distribution

Capture documents electronically using OCR to automate processes. Transform scanned documents into a wide range of editable formats including: TXT, TIFF, PNG, JPEG, PDF and PDF/A.

How?

Increase efficiencies by scanning directly to a specified location such as the cloud, a network folder, email inbox, FTP or desktop.

### Document and Content Management

Remote access and retrieval from a central (cloud) repository using any smart MFP device.

Organise documents in customised spaces adding metadata at smart MFP panel.

Track interactions, edits and versions to assist approval processes.

Improve collaboration and response times.

What?

### Security and Output

Cost control and full visibility of print and copy usage (quota) by user or department.

How?

Pull-printing: print jobs only released after user authentication to protect sensitive documents.

### Mobility and BYOD

Verify user credentials and print securely from different office locations or even outside your business network. No set up required.

### Device and Contract Management

Remote online monitoring to measure performance and maximise service level agreements.

Automated reporting and meter readings. Use historical trending reports to accurately forecast costs and plan ahead.

<sup>1</sup>Requires optional Metascan <sup>2</sup>Using optional SENDYS Explorer connectors <sup>3</sup>Network Card Reader required for Pull Printing

Built-in – The solution is part of the device's standard features. No additional installation is required. The equipment simply needs to be configured so the user can access the full benefits.  
Software and utilities – Desktop software provided with the device at no additional cost. These powerful tools enhance the value of the MFP to the organisation by extending its capability beyond the device.  
Integrated Solutions – OKI's sXP is a web services based architecture which allows the seamless integration of your OKI smart MFP with many business applications and solutions.

# Mobile Printing

Conducting business as usual while on the move

## Key Features

- Print any document, photograph or web page from a mobile device
- Improve workflow efficiencies
- Print from any mobile device to any printer
- Secure and hassle-free
- Convenient for mobile workers
- Flexibility to choose where and when to print

## OKI Products and Mobile Printing

OKI printers are compatible with a number of device agnostic applications available, so you can download an application of your choice that enables you to print to almost any device simply through a single mobile printing application.

AirPrint by Apple Inc, Google Cloud Print by Google Inc, Cortado Workplace and ePrint by Microtech Corp, are compatible with OKI's portfolio of mono and colour LED printers and MFPs.

### AirPrint (Apple Inc.) – Compatible with iPhone, iPad, iPod Touch

Apple Inc has developed a mobile printing solution called AirPrint that makes printing from Apple devices such as an iPhone, iPad or iPod Touch easy. All you need is a compatible Apple iOS device and an OKI printer that supports AirPrint. There is no need to download software or printer drivers or to configure or set-up your iOS or printer device. You simply need to ensure that the printer is connected to the same Wi-Fi network as your iOS device.

### Google Cloud Print (Google Inc.) – Compatible with iPhone, iPad and Android devices

Google Inc has developed a cloud printing service called Google Cloud Print™ enabling users to print on the go from a smartphone or computer using Google Cloud Print enabled apps. All you need is a compatible device and an OKI printer that is Google Cloud Print Ready™.

### Cortado Workplace – Compatible with iPhone, iPad, iPod Touch, BlackBerry, Android and Symbian

Cortado is an OKI partner, well-established in the business sector as a cloud and mobile printing solution. Cortado Workplace is a mobile printing app that enables you to print with a tablet, smartphone, PC or Mac. You can access your files from everywhere at any time, copy them to other devices and work and print on-the-go.

### ePrint app (Microtech Corp) – Compatible with iOS and Android devices

ePrint from Microtech is an mobile printing app for your iOS and Android devices. It enables you to print cards and calendar pages using photos stored in your device library, print notes you take within the app, and print a list of selected contacts.

# smart Extendable Platform (sXP)

Streamline your document intensive processes

## Key Features

- Transition easily from manual paper-based processes to an automated digital flow
- Complete integration into corporate DMS and ERP solutions
- Fast and accurate data capture
- Secure and accessible
- Significant time and cost savings
- Improved staff productivity
- Customisable user interface which can be integrated into an existing system or a new application
- Extensive solutions offering
- Integration fully supported by OKI

## How is it implemented?

In order to create an interface to a system or to set a path for document processing we supply a Software Development Kit (SDK) which allows any Value Added Reseller/Systems Integrator/Developer to link into our smart MFP and use the device for an infinite number of solutions.

Using the touch screen display the whole front end of the smart device can be customised to integrate into an existing system or a completely new application.

OKI has a wide range of solutions offering the flexibility to support your customer's unique business requirements.

## Smart Document Workflow

Documents are captured, digitised and processed through an OKI MFP with embedded sXP. Documents are then sent to a chosen destination to be stored or further analysed via a 3rd party application.

## OKI's sXP is compatible with a number of 3rd party solutions

sXP enables seamless integration of OKI smart MFPs with your bespoke system or 3rd party solutions. Designed to enhance the document workflow, management and security within your organisation, OKI's portfolio of Smart Solutions meets the needs of your customer's business whether office based, mobile or in the cloud.

### OKI's Smart Solutions can be categorised into five key areas:

- Capture and distribution
- Document and content management
- Security and output
- Mobility
- Device and contract management

# smartPrintSuperVision

The remote monitoring and configuration solution from OKI

## Key Features

- Proactively manage and monitor networked OKI printers/MFPs and most compatible devices from other manufacturers
- Monitor printing costs
- View the usage of consumables
- Predict toner levels and image drum life for accurate planning
- Use standard Web browsers to view device status
- View usage reports on-screen or in XML and Excel<sup>®</sup> formats; export data in Text and CSV formats
- Create and control user access rights
- Schedule reports and generate automated e-mail delivery
- Both versions track usage (colour vs. black & white output, paper size, paper type, and device usage time) by job name, user, group or department
- Calculates costs for each device, including cost per page and supplies used
- Controls the cost of colour printing through management of colour access
- Provides data in real time, viewable via Web browser

## Controlling costs - Get a grip on expenses and make educated decisions

### Cost Control

Get visibility and control of print and copy usage, by user or department quotas. You can capture details on colour vs. black & white pages, number of pages, page size, paper types and paper trays used, and document name, by job name, person or department. You can even assign costs for supplies. Access levels can be assigned by user name, PC/server name, application, file name and website URL. Once policies are configured, the software determines how, or if incoming jobs will print. Eventually you can easily make educated decisions on device consolidation.

### Track Print Activity

You can make colour printing cost-effective by letting administrators track and monitor colour printer usage by users or departments, thus successfully identify print volume needs.

### Print Policy Management

You can easily restrict all printing or just colour printing at individual user level or set individual printing usage limits by cost or pages. Businesses will also find it far easier to manage their resources and bill for their productivity.

### Cost Allocation and/or Cost Recovery

When charging back for colour documents, you can set five levels of colour coverage, allowing you to bill accurately for colour prints and copies. The program is simple to set up, and has a configuration wizard to expedite the process. Gather data at any time, and generate reports in CSV format, for easy export to familiar spreadsheets. This encourages responsible printing and allows you to make educated decisions on device consolidation.

## Optimise resources - Manage and monitor all your devices with ease

### Status at a glance

Identify device configurations and capabilities in one comprehensive screen - which also includes easy-to-identify, colour-coded supply levels and operational status, displayed in real-time.

## Keep an eye on printed page volume

Display print volumes for one or several devices at a time. Create graphs and print results right from the application, or export data in a variety of formats.

## Keep your device locations in plain sight

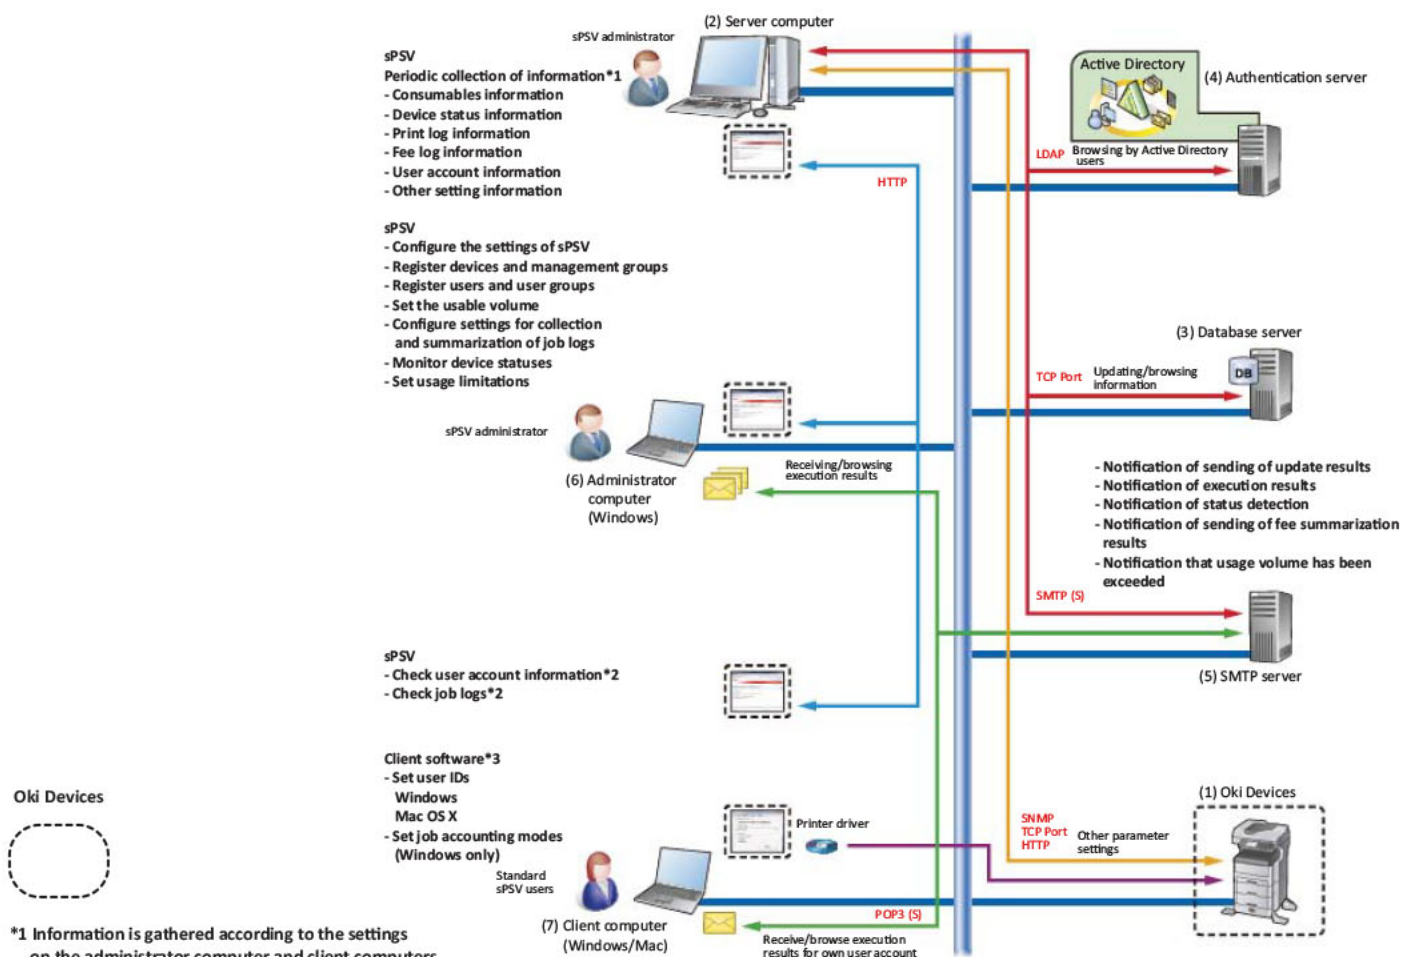

Find and identify devices easily. You can simply import floor plans, site maps or geographic maps, and place interactive icons where your devices are actually located.

## Maximize uptime, minimize service calls

Predict consumables "change by dates" to help you better plan your supplies purchases, plus you can receive email notifications when supplies are required.

## Mechanisms of sPSV

Oki Devices

\*1 Information is gathered according to the settings on the administrator computer and client computers.

\*2 Users can only browse this for their own user account

\*3 This needs to be installed if identifying user IDs by user ID (PIN).

No.	Name	Details
(1)	Device	Printers, multifunction printers, etc, managed using sPSV
(2)	Server computer	The server on which sPSV is installed
(3)	Database server	The server that executes database processes
(4)	Authentication server	The server that executes directory services (in the case of sPSV, this refers to Active Directory.)
(5)	SMTP server	The server that executes email processes
(6)	Administrator computer (Windows)	By logging in as an sPSV administrator in a web browser and accessing the server computers from this computer, it is possible to register devices, users and user groups, set usage limitations and manage devices.
(7)	Client computer (Windows/Mac)	A computer on which users can print pages and browse information managed in sPSV. - If users are identified by user IDs (PINs), it is possible to set usage limitations and summarize printing costs for specific users by installing the client software and registering user IDs (PINs).

# Graphic Arts

Light production printing

## Key Challenges

- Businesses are wasting valuable budget on expensive, traditional printing methods. Print service providers frequently turn away potential revenue because short run printing does not generate enough profit and specialised printing processes often have to be outsourced e.g. personalised designs using dark, transparent or transfer media
- Marketing departments and communication agencies seek service providers that can handle variable data printing (VDP) to help make the most of opportunities by leveraging customer data, to improve customer communications and maximise return on marketing investment (ROMI)
- Designers and creative teams deliver fantastic, high-impact designs but the final result lacks impact. Existing printers do not come close to reproducing the colour or quality of a final design in creative mock-ups, delaying sign-off and making proofing a challenge
- Businesses often require print runs of envelopes for direct and personalised marketing campaigns however, producing profitable short print runs is often difficult within an existing commercial printing environment

## How OKI can help improve your business

### Make light digital production printing profitable

Ideal for both small and large print service providers, OKI Graphic Arts Solutions are perfect for cost effective, short run digital printing of high quality professional applications that can be reprinted on demand. From flyers, brochures, leaflets and newsletters to technical manuals and annual reports, versioning and pre and post-production printing is cost effective and removes the need to print large volumes unnecessarily, avoiding waste.

### Improve customer communications and margins with variable data printing

Direct mail is an essential link between a brand and consumer. OKI's advanced printing solutions enable organisations to improve response rates and maximise return on marketing investment (ROMI). Convert generic marketing communications into regionalised, localised and personalised materials. Improve customer retention and turn prospects into customers by combining variable data printing with digital colour for tailored messages, coupons and discounts based on customer insight.

### Produce high-quality creative proofs and realistic design mock-ups

High quality mock-ups and content proofs enable organisations to accurately predict what a final printed document or product will look like before the actual press run. Using OKI Graphic Arts Solutions, designers, agencies and pre-press departments can provide customers with creative colour proofs, realistic mock-ups and other visuals. From page proofs to packaging prototypes and window clings, our flexible, innovative white and clear toner technology prints on a wide range of media up to 360gsm for fast, affordable standout results.

*Continue to next page...*

### Expand your business with digital short-run envelope printing and accelerate your time to market

Digital printing is ideal for short run envelope requirements of 5,000 and less. Print service providers can address this unserved market by printing high-quality short run jobs using digital printers in far less time than traditional methods. Add value with variable data printing and provide expanded services such as direct mailing. Fulfil unusual and creative designs and generate new sources of revenue using OKI's advanced printing technology to print on dark envelopes and other flat media with clear or white toner.

## Graphic Arts

Large format

### Key Challenges

- Print providers are under pressure to deliver high impact results but not all large format printers offer the flexibility and precision needed. Many large format printers start to lose colour density and detail in dark areas as they reach high speeds
- Maintaining productivity is essential in busy printing environments, making equipment down time costly, compromising service levels and risking reputation
- Sunlight, pollution and other weather conditions cause outdoor signs, banners and vehicle wraps to fade and degrade. To ensure customer satisfaction and repeat business, outdoor media needs to be robust enough to withstand changing conditions
- Providing indoor applications is a growing market where high quality prints will be viewed close up therefore high resolution and accurate print registration are essential. Additionally in a confined indoor environment certified low odour inks are critical

*Continue to next page...*

# How OKI can help improve your business

## Impress customers with sharp detail and rich, glossy colour

No matter how small or large the design, today's businesses demand vibrant colour and sharp, photo quality detail from graphic arts printing. Meeting these expectations, versatile large format graphic communications printers from OKI maintain accurate colour density even in dark areas. Combining high viscosity inks with advanced print heads, photo quality images are crisp and sharp. Innovative Dynamic Drop Printing (DDP) technology accentuates fine details and delivers smooth gradients and rich, glossy colours, even at high print speeds.

## Maintain productivity under pressure with reliable print performance

Purpose built to withstand demanding high-volume production environments, OKI large-format graphics printers are enhanced with a wide range of innovative features designed to save time and reduce manual input. Industrial high-frequency greyscale print heads increase the quality and reliability of the printer and print results. Smart Nozzle Mapping (SNM) technology re-maps clogged nozzles, minimising downtime while extending the life of the printhead, while intelligent CP\_Manager software makes it possible to monitor and operate the printer from a PC, tablet or smartphone and get real-time updates via Twitter.

## Achieve lasting durability for long-life outdoor applications

From custom vehicle wraps to banners, signs and awnings, outdoor media needs to be durable enough to withstand sunlight, changing weather conditions, pollution and other external factors. Featuring innovative low-odour, eco-solvent SX inks, OKI's range of large-format graphics printers offer the flexibility to print on a wide range of media and provide the right print quality and UV stability for outdoor applications, making them ideal for creating banners, fleet and vehicle graphics, wall and floor graphics, POP displays, exhibition graphics and more. High ink pigmentation also creates ideal saturated prints for backlit applications.

## Access new markets and additional revenue with for high-quality indoor applications

Light frames for technical textile and backlit materials over floor graphics, point of sales (POS) and point of presentation (POP) via different types of wallpaper offer a versatile range of applications. Together with the high value certification from UL LCC the "Greenguard Gold" and the approval from the Nordic Eco Label for OKI's environmentally friendly SX-Ink we have the printers and inks that are perfect for this lucrative market.

# Healthcare

Ensure private healthcare data is kept safe and secure

## Key Challenges

- Maintaining secure systems and keeping patient data confidential are critical concerns. Preserving the privacy of sensitive information is crucial
- Paper-based processes in the pharmacy for the processing of prescriptions is a time, cost and resource drain
- Medical tests are slowed down by lengthy administration processes, adding time and cost to the process
- Not all printing solutions deliver sufficient quality for medical imaging and may block the use of medical equipment, impacting clinicians' ability to make the right diagnosis and creating delays. IT solutions that are not collaborative can have a negative effect on healthcare delivery

## How OKI can help improve your business

### Ensure private healthcare data is kept safe and secure

All health services hold large volumes of highly sensitive personal data, making security and data privacy of paramount importance to every provider. The latest OKI MFPs feature built-in security to protect sensitive patient information. This includes an Encrypted Secure Print function for protected printing and user access authentication to ensure complete document confidentiality.

### Reduce time and cut costs in the pharmacy

In many countries, prescription processing within the pharmacy is paper-based and labour-intensive. Using the latest print solutions from OKI, pharmacies can scan the prescription and digitally send the relevant information including the social security number within the barcode back to the healthcare provider, cutting processing time and ensuring accuracy.

### Release valuable resource and ensure accuracy in the patient testing process

Medical testing in healthcare laboratories is a labour-intensive process. Receptionists bear the administrative burden, taking identification numbers from patients, searching through relevant databases and printing the relevant results. Switching the printer to an OKI smart MFP, moving it into the waiting area and allowing the patient to use their ID details to print the results themselves is a patient-centric alternative solution that can empower their experience, as well as save time and cost.

### Guarantee flexibility, integration and exceptional print quality with DICOM embedded solutions

Medical imaging equipment such as x-ray, ultrasound and scanners, provide clinicians with diagnostic quality images directly to their computer screens using a special DICOM (Digital Imaging COMMunication) protocol. Healthcare providers are able to reduce the time taken to patient diagnosis and costs are reduced as there is no need to prepare expensive medical films. However, when hardcopy output is required, this poses a challenge in terms of IT integration as standard Postscript printers need to be connected to a DICOM print server which can slow down or block medical equipment from use. OKI solves this issue by embedding DICOM intelligence within the printer, negating the need for additional hardware and streamlining support through a single point of contact. An embedded solution provides superior image quality and now with DMe (DICOM Enhanced) better than ever mono printing for x-ray/ultrasound and a lower cost of ownership.

## DICOM PRINTERS

**C711DM**  
(Page 16)

Delivers productivity gains  
for healthcare providers

**C831DM**  
(Page 16)

## A4/A3 DICOM PRINTERS

	C711DM	C831DM
Description	A4 Digital LED DICOM Printer	A3 Digital LED DICOM Printer
Imaging Technology		
Resolution	CMYK toner based engine with tandem technology. Light sources are LED arrays @ 600 dpi with multi level capability	
Compatibility		
Connectivity	10/100 Base TX (RJ45) Interface	
Paper Handling		
Paper Capacity	Tray 1: A4 - 64 to 250gsm	Tray 1: A4 and A3 - 64 to 256gsm
DICOM Server Features		
Capability	DICOM 3.0 Print SCP, Store to Print (US, Ophtalmic, Endoscopy)	
Maximum number of AET	25	
Max # calling modalities	3 simultaneous, no restriction on total connectable modalities	
Dicom Server interface	Integrated web Server	
Log	Extended log capability in case of troubleshooting	
Dicom Optional features	LUT: identity, reverse, lin-od; True size printing; Colour	
Image generation	Specific colour rendering optimized for medical images	
Graphical Header	Capability to add a custom graphical header on each printout	
AET Dependent Features		
AETName	Print SCP Application Entity Title (AET)	
Print Destination	Allows to print DICOM Images on other non DICOM OKI printers	
Printer Tray	Use preferred paper for your medical prints	
Copy	Send one, print what you need	
Page Format	Force output format to desired size	
Replace Header by Logo	Enhance your communication on the printouts	
Header	Enter text that will print on top of page or Select Logo	
Footer	Edit the text on page bottom	
Booklet Print Mode	Tells the Server to make a booklet with your Images	
Border Density	Value from Black, White or Client	
Empty image Density	Value from Black, White or Client	
Image Background	Fill or not the unused reserved space with black	
Polarity	Force image polarity inversion if needed	
Smoothing Filter	Activate and adjust the level of Sharpen

## ColorPainter E-64s

Description	Large Format Colour Printer
Imaging Technology	
Resolution	1080 dpi
Compatibility	
Connectivity	USB 2.0
Operating Features	
Print head	Industrial High-Frequency Dynamic Drop-On-Demand Piezo Print-Head
Number of nozzles	254 nozzles/head
Printing speed	1.9 to 22.9 m <sup>2</sup> /h (20 to 246 f <sup>2</sup> /h)
Media Handling	
Maximum media width	1,626 mm (64")
Maximum print width	1,616 mm (63.6")
Media weight	Up to 24 kg (110 lbs)
Maximum media diameter	180 mm (7")
Margin size	5 mm (1/5") on each edge (with rolled media, without edge guards)
Ink type	Eco-Solvent: SX
Color	6 (C, M, Y, K, Lc, Lm)
Ink capacity	500 ml. per colour
Media	PVC, Banner and other media designed for solvent ink printers
Heater	3-way built-in heaters (Pre-, Print-, After-Heater)
Take-up modes	Tension or loosen, inside or outside winding.
General Features	
Dimension / Weight	2,830 (W) x 830 (D) x 1,255 (H) mm, (112" x 33" x 50") / 228 kg (502 lbs) or less without media and inks
Power source	120 VAC, 50/60 Hz, 12a/220 to 240 VAC, 50hz/60hz, 6A
Power	1,350 W or less

# SERIAL IMPACT DOT MATRIX PRINTERS

## **What it does**

Serial Impact Dot Matrix (SIDM) is the printer of choice for forms, multiple copies and for operating in harsh environments. We continue to maintain the position as a supplier of the most robust and reliable products within the professional dot matrix sector. These printers have unsurpassed reliability, low cost per page, unmatched paper handling and meet a growing demand for affordable, high speed and high specification products.

## Why OKI?

OKI is the business printing specialist.

Our single-minded aim is to help businesses to grow and to prosper by enabling them to create the best possible impression with their printed communications.

By building on our proven, reliable, single-pass technology, we have developed fast, high quality, cost-effective printing solutions that benefit businesses today and into the future.

We also know how important reliability is for customers. That's why every one of our products is built to perform, day in, day out, helping to maintain business efficiency and provide that competitive edge.

OKI. No one does more in business printing.

## High Definition Colour

High Definition Colour is OKI's own unique set of market defining hardware and software technologies. Together, these components deliver unsurpassed colour printing simply, intelligently, and with perfect results.

## 30 years of LED Technology

OKI pioneered the development of digital LED technology in printers over 30 years ago. This innovation delivers High Definition printing – for more accurate, striking printed documents. Thanks to this digital LED technology, our printers are compact, environmentally friendly and energy efficient, using significantly less raw materials in the manufacturing process and consuming less energy. LED print-heads have no moving parts, making our LED printers robust and ultra reliable.

## Considering the Environment

As part of the OKI Group's Charter of Corporate Conduct, OKI continually reviews its efforts to provide environmentally sound solutions to its customers:

- Our products are designed and manufactured with reducing the impact on the environment in mind. Increasing the amount of our hardware products and consumables that are recycled is one of our strategic objectives.
- We feel responsible for conducting our business in an environmentally sound manner, contributing to conservation and activities within our local communities.

OKI's Green Leaf symbol, found on all products and packaging, represents our total commitment to collection, recycling and environmental processes.

## Energy Star

Our printers and MFPs have earned the Energy Star by helping to eliminate energy waste through particularly energy efficient designs. They use less energy to perform regular tasks. When not in use, they automatically enter a power save mode and product features such as, duplex printing, further reduce the wasting of energy and paper resources.

# OKI
